

# **FAST FACTS: Music**

MUSIC therapy: Listening to (or playing) music as a form of enjoyable distraction.

## ✓ Your loved one may enjoy:

- Listening to their favorite type of music
- Singing hymns or other favorite songs
- · Listening to instrumental or harp music
- Playing piano, guitar, or other instruments
- Dancing
- Watching children playing instruments or singing

### ✓ How Does it Work?

- Research indicates that listening to your preferred style of music can:
  - 1. Reduce pain
  - 2. Lower blood pressure, heart rate, and respiratory rate

## ✓ What Can you Do?

- Discuss with your loved one their music preferences and experiences with music
- Advocate for your loved one to have access to the items or opportunities necessary for using their preferred music as a nondrug pain management
- Assist your loved one to gather the needed equipment (i.e. device to listen to music/head phones) and a variety of music options they enjoy
- Set up the musical equipment as needed for your loved one prior to the session
- Ask your loved one prior to beginning each session what their pain/tension level is on a 0-10 pain scale and do this again at the end of the music session.
- Document pain ratings so you can share with your loved one's healthcare team.

#### ✓ What Else You Should Do:

 Consider using a <u>Pain Diary</u> to note important information useful to the provider on a regular basis.
