

FAST FACTS: Non-Drug Treatment: Positioning

Positioning means changing or staying in a comfortable position.

✓ Benefits of Positioning:

- Helps with pain management
- Decreases risk of complications such as bedsores
- Helps maintain range of motion

✓ Guidelines for Positioning and Stretching:

- Use pillows for support
 - When you are laying on your side, make sure your ear is flat on the pillow and not turned under.
 - A full body pillow can be used to assist with positioning on your side.
- Gently bend and straighten arms and legs while turning; do not force joints or muscles beyond a place of comfort.
- If you are able to sit up, try pretend “writing” the alphabet in the air using your feet or arms to support stretching and range of motion.
 - You can alternate arms or feet writing six letters at a time
 - Example: *Right Foot* - A, B, C, D, E, F / *Left Foot* - G, H, I, J, K, L

✓ What Else You Should Do

- Write down and share information about your pain with your healthcare provider
- Use a [Pain Diary](#) to note important information useful to the healthcare provider
- Try a non-drug treatment and document the impact on your pain in your Pain Diary
